

GETTING STARTED WITH PYTHON

(tested for a few linux flavors and Windows 10):

- 1) Go to <https://www.continuum.io/downloads>
- 2) Follow download & default install instructions for your operating system (recommended python version > 3)
- 3) Launch anaconda/jupyter notebook (via clicking, or typing in the terminal \$ jupyter notebook)
- 4) A new tab should open in your browser, showing the files/folders in your user directory
- 5) Now either navigate to the .ipynb file you downloaded, or place it in that directory, or make a new one!
